Konrad Group

Dear Hiring Team,

I am writing to apply for the Associate UI/UX Designer position at Konrad Group. I recently completed my Bachelor of Science in Computer Science at the University of Oregon, and this role stood out to me because it sits at the intersection of design, technology, and product thinking. I'm especially interested in opportunities where I can help shape digital experiences that are not only visually polished, but also clear, usable, and realistic to build.

My background is technical, but much of my project work has been driven by user experience and interface design. In my personal portfolio, I focused heavily on visual hierarchy, motion, responsive layout, typography, and small interaction details to create a site that feels more memorable than a standard developer portfolio. That project helped me think more carefully about how design choices affect first impressions, readability, personality, and flow.

I've also built product interfaces where UX complexity mattered just as much as visual polish. Backlog, my full-stack job search platform, required organizing job postings, company details, AI match scores, application statuses, resume-tailoring outputs, and user actions into a workflow that still felt understandable. The challenge was not just building components, but designing the experience around how someone actually applies to jobs: discover, review, compare, save, tailor, and act. I used React, Next.js, TypeScript, Tailwind CSS, Framer Motion, and Supabase to build the interface and connect it to real application data.

What interests me about Konrad Group is the opportunity to learn the full design delivery process while collaborating with designers, developers, and strategy teams. I like that the role emphasizes user research, information architecture, journey mapping, wireframes, visual interfaces, and pixel-perfect execution. My technical background gives me a strong understanding of how design decisions translate into implementation, and I enjoy bridging that gap between concept and shipped product.

I'm still early in my design career, but I have a strong eye for detail, a genuine interest in UI/UX fundamentals, and a builder's mindset. I care about spacing, hierarchy, responsiveness, accessibility, motion, and whether an interface helps users accomplish what they came to do. I

would be excited to keep growing as an experience designer at Konrad Group while contributing my frontend development background, product thinking, and curiosity to client-facing digital products.

Thanks for your time,

Kenny Nguyen
