Boeing

Dear Hiring Committee,

I am excited to apply for the Boeing Summer 2026 Internship Program in Quality Engineering. As a computer science student at the University of Oregon graduating March 21, 2026, I am eager to contribute to Boeing's mission of ensuring quality and excellence in aerospace innovation.

My current experience as a Software Engineer Intern at EpiBuild has provided hands-on exposure to quality assurance and process validation. I've developed and implemented an intelligent patient data matching system addressing critical data integrity issues, ensuring accuracy and compliance in data processing. I've created systems that validate and normalize data, perform quality checks, and identify inconsistencies, skills directly applicable to supplier quality management and process audits. My work automating clinical data processing has taught me to pay meticulous attention to detail and verify compliance with established procedures.

My technical background in software engineering, combined with my experience in data analysis and system design, positions me well for Quality Engineering. I have experience developing quality metrics, implementing validation processes, and analyzing data to identify trends and non-conformances. My projects, including EmoScanner and Four's & Nine's, required rigorous testing, validation, and optimization to ensure accuracy and reliability, mirroring the quality assurance processes essential in aerospace manufacturing.

What excites me most about this internship is the opportunity to work on Supplier Quality and Performance Management, supporting verification of supplier parts and components, conducting process audits, and ensuring compliance with Quality Management System requirements. I am particularly interested in learning how Boeing maintains quality standards across complex supply chains and contributes to the safety and reliability of aerospace systems. The hybrid work arrangement aligns well with my location in Portland, OR, and I am eager to collaborate with experienced quality engineers while learning about aerospace quality standards.

I am drawn to Boeing's commitment to excellence and safety in aerospace. The opportunity to contribute to quality engineering processes that ensure the reliability of products connecting the

globe, protecting freedom, and advancing scientific discovery represents exactly the kind of meaningful work I am passionate about pursuing. I am confident that my technical foundation, attention to detail, and process-oriented mindset will allow me to contribute meaningfully to your quality engineering team.

Thank you for considering my application. I look forward to the possibility of joining Boeing as a Quality Engineering intern and contributing to the standards of excellence that define the future of aerospace.

Sincerely,

Kenny Nguyen
