Department of the Air Force

Dear Hiring Committee,

I am excited to apply for the Computer Scientist position through the PALACE Acquire Program with the Department of the Air Force. As a Computer Science student graduating March 21, 2026 from the University of Oregon, I bring strong software development, system architecture, and technical problem-solving skills that align well with supporting Air Force computing and software development initiatives.

My computer science education and hands-on experience position me well for this role. I have a solid foundation in computer science principles, algorithms, data structures, and software engineering through my coursework at the University of Oregon and Pacific University. My technical skills include proficiency in multiple programming languages including Python, Java, C, C++, and JavaScript, as well as experience with software development tools, version control systems, and system administration.

My software development experience aligns with the duties of this position. As a Software Engineer Intern at EpiBuild, I have performed software and system development work, implemented solutions based on defined requirements, and troubleshooted technical issues. I have developed full-stack web applications, created automated systems, and implemented intelligent data processing solutions. This experience demonstrates my ability to perform developmental work in computer architecture, implement software solutions, and contribute to system development efforts.

My system administration and troubleshooting experience from my role as Computer Helpdesk Technician at Pacific University provided hands-on experience with computer systems, hardware, and software. I have experience troubleshooting computational errors, restoring systems to functional state, and performing system installations and configurations. This background demonstrates my ability to perform software and system troubleshooting as directed, review system status information, and work with technical systems.

What excites me most about the PALACE Acquire Program is the opportunity to contribute to Air Force computing initiatives while receiving structured training and professional

development. The chance to work on computer architectural projects, participate in software and system life cycle phases, and develop skills in planning and coordinating computing efforts represents exactly the kind of meaningful technical work I am passionate about pursuing. I am particularly drawn to the program's focus on both personal and professional growth, and I am eager to contribute to Air Force missions while developing expertise in computer science applications.

I understand that this position may require security clearance and involves work that supports critical Air Force operations. I am committed to meeting all requirements, maintaining the highest standards of professionalism and integrity, and contributing effectively to team objectives. I am a U.S. citizen and am prepared to undergo any necessary security clearance processes.

Thank you for considering my application. I look forward to the opportunity to contribute to the Department of the Air Force through the PALACE Acquire Program and to develop the skills and expertise needed to support Air Force computing and software development initiatives.

Sincerely,

Kenny Nguyen
