American Credit Acceptance

Dear Hiring Team,

I am writing to apply for the Data Analyst | 2026 Start position at American Credit Acceptance. I recently completed my Bachelor of Science in Computer Science at the University of Oregon, and this role stood out to me because it combines data analysis, SQL, programming, reporting, and business communication in a financial services environment.

My background includes software development, data processing, database-backed applications, automation, and working with messy real-world data. In my Software Engineer Internship at EpiBuild, I built internal tools to support clinical data collection, extraction, normalization, and billing workflows. I used spreadsheet automation and data validation logic to reduce repetitive manual work, improve consistency, and make raw operational data easier to review and process. I also developed patient-matching logic using Levenshtein distance to identify inconsistent name spellings, duplicate records, and missing identifiers across spreadsheet-based data.

That experience connects closely with the Data Analyst role because accurate reporting starts with clean, validated, well-understood data. I am comfortable working with SQL, joins, filters, grouping, aggregations, structured data, spreadsheets, programming logic, and explaining technical findings in a clear way. I enjoy the process of taking raw or confusing information, identifying patterns or issues, and turning it into something that helps a team make a better decision.

My project work has also strengthened my data and analytical skills. In Backlog, my full-stack job search platform, I built workflows for ingesting job postings from multiple sources, filtering noisy data, normalizing job descriptions, scoring role fit with AI, and tracking application status through a database-backed system. In Syllabify, I helped build an academic planning application that parses unstructured syllabi into structured assignments and generates schedules around user preferences and calendar data. I have also been building finance-oriented projects such as QuantVault and LedgerBridge to further develop my understanding of portfolio analytics, risk workflows, and financial data systems.

What interests me about American Credit Acceptance is the opportunity to support business

teams with clear reporting, data quality, and analysis that can influence real operational and strategic decisions. I'm early in my career, but I bring strong technical fundamentals, curiosity, attention to detail, and a willingness to learn the business context behind the data.

Thank you for your time and consideration. I would be excited to discuss how my background in SQL, programming, data validation, and software-driven analysis could support ACA's data and reporting needs.

Sincerely,

Kenny Nguyen
