University Health Services, University of Oregon

Dear Hiring Committee,

I am excited to apply for the Desktop Support Services Manager position with University Health Services at the University of Oregon. As a Computer Science student graduating March 21, 2026, I bring hands-on IT support experience in higher education, technical expertise, and a strong foundation in service desk operations that I am eager to apply to managing UHS IT support services.

My experience managing IT support aligns with the key requirements of this position. As a Computer Helpdesk Technician at Pacific University from October 2021 to May 2023, I provided comprehensive desktop support services to university faculty and students. I managed daily system performance, troubleshooted computational errors, restored devices to functional state, and performed installations of operating systems, hardware, and software. This role provided me with direct experience in help desk operations, desktop support, and managing IT services in a higher education environment, skills directly applicable to overseeing UHS IT support.

While my management experience is still developing, I have demonstrated leadership and coordination skills through my technical work. In my helpdesk role, I coordinated equipment setup, managed multiple support requests simultaneously, and worked independently to resolve complex technical issues. In my current role as a Software Engineer Intern at EpiBuild, I have taken on project coordination responsibilities, worked with cross-functional teams, and managed technical implementations that required careful planning and execution. I have also maintained a Discord bot with 99.9% uptime, demonstrating my ability to manage services and ensure reliability.

My technical expertise positions me well to provide solutions while managing administrative functions. I hold CompTIA A+ certification and have extensive experience with Windows and Linux systems, hardware troubleshooting, and network configurations. I am proficient with various IT tools and have experience implementing automated solutions to improve efficiency. My software development background allows me to understand system administration needs and recommend appropriate technology solutions.

What makes me particularly well-suited for this role is my experience working in higher education IT support and my understanding of the unique needs of academic environments. I have worked directly with faculty and students, understand the importance of maintaining high-quality services, and have experience balancing technical excellence with user-friendly support. My experience with both technical and non-technical users has developed my ability to explain technical concepts clearly and provide effective solutions.

I am drawn to this position because it offers the opportunity to contribute to UHS's mission of supporting student health and wellbeing through reliable IT services. The chance to manage service desk operations, implement best practices, and ensure compliance with policies while supporting the technology needs of a healthcare environment represents exactly the kind of impactful work I am passionate about pursuing.

I understand that this role requires strong management experience, and while I am early in my career, I bring a solid foundation in IT support operations, technical expertise, and a commitment to excellence. I am eager to develop my management skills further and contribute to UHS's IT operations while learning from experienced leadership.

Thank you for considering my application. I look forward to the opportunity to contribute to University Health Services and support the technology infrastructure that enables excellent healthcare services for UO students.

Sincerely,

Kenny Nguyen
