Pacific University

Dear Hiring Committee,

I am excited to apply for the Electronic Health Records Support Analyst position at Pacific University. As a former Pacific University student and employee, I bring a deep connection to the university community, combined with hands-on experience working with clinical data and healthcare systems that aligns well with supporting Epic EHR and clinical applications.

My connection to Pacific University makes this opportunity particularly meaningful. I attended Pacific University from 2021 to 2023 before transferring to the University of Oregon to care for my family. During my time at Pacific, I served as a Computer Helpdesk Technician, supporting faculty and students with technology needs. This experience gave me firsthand knowledge of Pacific's community, values, and commitment to excellence, and I am eager to return to contribute to the university's mission.

My current experience working with clinical data positions me well for EHR support. As a Software Engineer Intern at EpiBuild, I work extensively with patient data, clinical information systems, and healthcare data processing. I have developed and implemented intelligent patient data matching systems, addressed data integrity issues in medical lab processing applications, and created systems that process and manage clinical information. This experience has given me understanding of healthcare data workflows, patient information management, and the importance of accuracy and compliance in clinical systems.

My technical skills align with the requirements of this position. I have experience with data management, system integration, and creating documentation and training materials. I am proficient with Microsoft Office applications including Excel and Word, and I have experience creating user-facing applications and documentation. My work developing automated workflows and data processing systems demonstrates my ability to understand complex systems, troubleshoot issues, and implement solutions.

While I have not yet worked directly with Epic EHR, I have extensive experience with healthcare data systems and understand the critical nature of EHR support. My experience with patient data matching, data integrity, and clinical information processing provides a strong

foundation for learning Epic and supporting its implementation. I am a quick learner with strong problem-solving skills and am eager to develop expertise in Epic EHR and other clinical applications.

What excites me most about this opportunity is the chance to return to Pacific University and contribute to supporting the clinical operations that serve students, faculty, and patients. The opportunity to work with Epic EHR, collaborate with clinical teams, and support the integration of technology into healthcare workflows represents exactly the kind of meaningful work I am passionate about pursuing. I am particularly drawn to the training and workflow optimization aspects of this role, as I enjoy helping users effectively utilize technology systems.

I understand that this position requires experience with Epic or similar EHR systems, and while I am still developing this specific expertise, I bring strong foundational skills in healthcare data management, system support, and user training. I am committed to learning quickly and contributing to Pacific University's clinical operations while developing expertise in Epic EHR support.

Thank you for considering my application. I look forward to the opportunity to return to Pacific University and contribute to supporting the excellent clinical services that benefit the university community.

Sincerely,

Kenny Nguyen
