Department of the Navy

Naval Surface Warfare Center Dahlgren Division - Dam Neck Naval Facility

Dear Hiring Committee,

I am excited to apply for the STAVE VMT/BFTT/ATD Software Engineer position with Naval Surface Warfare Center Dahlgren Division at Dam Neck Naval Facility. As a Computer Science student graduating March 21, 2026 from the University of Oregon, I bring strong software engineering, object-oriented programming, and technical leadership experience that aligns well with supporting training systems software development for the Navy.

My software engineering experience positions me well for this role. As a Software Engineer Intern at EpiBuild, I have applied computer engineering principles to design and develop software solutions for complex technical problems. I have utilized object-oriented programming languages including Java, C++, and Python, and I have managed complex software development tasks independently. My work includes developing software requirements and design, programming, integration, troubleshooting, and conducting software testing activities. This experience demonstrates my ability to provide advanced software engineering knowledge and support for software development projects.

My software testing experience aligns with the technical requirements of this position. I have developed software test procedures, conducted regression testing, and generated test reports documenting results and recommendations. I have performed unit testing, integration testing, and validation testing to ensure software quality and reliability. This experience demonstrates my ability to provide advanced technical support to development testing activities as required for STAVE VMT and BFTT/ATD systems.

What excites me most about this opportunity is the chance to contribute to critical training systems that prepare naval personnel for operational readiness. The opportunity to work on STAVE Virtual Maintenance Trainer and Battle Force Tactical Training software, manage complex software development projects, and provide technical leadership represents exactly the kind of meaningful technical work I am passionate about pursuing. I am particularly drawn to the focus on mentoring junior engineers and building collaborative relationships with customers and

external partners.

I understand that this position requires security clearance and involves work on critical defense training systems. I am a U.S. citizen, committed to meeting all requirements including DoDM 8140.03 Cyber Workforce Qualification, and prepared to undergo necessary security clearance processes. I am eager to contribute to Naval Surface Warfare Center Dahlgren Division's mission while developing expertise in training systems software development.

Thank you for considering my application. I look forward to the opportunity to contribute to STAVE VMT and BFTT/ATD software development and support the critical training systems that ensure naval operational readiness.

Sincerely,

Kenny Nguyen
