Department of the Navy

Naval Sea Systems Command

Naval Surface Warfare Center Dahlgren Division

Dear Hiring Committee,

I am excited to apply for the Next Generation Missile Defense Systems Engineer position with the Naval Surface Warfare Center Dahlgren Division. As a Computer Science student graduating March 21, 2026 from the University of Oregon, I bring strong systems engineering, software development, and technical problem-solving skills that align well with supporting next-generation warfare systems development for the surface fleet.

My systems engineering experience positions me well for this role. As a Software Engineer Intern at EpiBuild, I have applied systems engineering principles to design, develop, and implement software solutions. I have conducted requirements analysis, designed system architectures, and developed integrated solutions that address complex technical problems. My work developing intelligent data matching systems and automated workflows demonstrates my ability to analyze system requirements, design effective solutions, and implement systems that meet operational needs.

My software development experience aligns with the technical requirements of this position. I have extensive experience with multiple programming languages including Python, Java, C, C++, and JavaScript, and I have developed full-stack applications that integrate multiple components and systems. My experience with software development lifecycle processes, version control, and collaborative development positions me to contribute effectively to warfare systems development efforts.

What excites me most about this opportunity is the chance to contribute to next-generation missile defense systems that protect our nation's surface fleet. The opportunity to work on systems engineering analysis, develop architectures and requirements for warfare systems, and implement Agile development and DevSecOps best practices represents exactly the kind of meaningful technical work I am passionate about pursuing. I am particularly drawn to the focus on Model-Based Systems Engineering (MBSE) and data analytics, areas where I have

foundational experience and am eager to develop further expertise.

I understand that this position involves working on critical defense systems and requires security clearance. I am a U.S. citizen, committed to meeting all requirements, and prepared to undergo necessary security clearance processes. I am eager to contribute to Naval Sea Systems Command's mission while developing expertise in warfare systems engineering and defense technology.

Thank you for considering my application. I look forward to the opportunity to contribute to next-generation missile defense systems development and support the Naval Surface Warfare Center Dahlgren Division's critical mission.

Sincerely,

Kenny Nguyen
