University Health - IT Service Delivery

Dear Hiring Committee,

I am excited to apply for the Field Engineer position with University Health's IT Service Delivery department. As a Computer Science student with hands-on experience in computer hardware repair, installation, and technical support, I bring strong technical skills and a commitment to ensuring reliable IT equipment support for healthcare operations.

My computer hardware repair and installation experience aligns well with this position. As a Computer Helpdesk Technician at Pacific University from October 2021 to May 2023, I repaired computer and laptop parts for university faculty and students, performed proper installation of cables, operating systems, and hardware/software, and troubleshooted computational errors to restore devices to functional state. This experience provided me with over one year of hands-on experience in personal computer repair, terminal support, and equipment installation, directly matching the requirements of this role.

My Windows and Microsoft Office experience meets the technical requirements. I have extensive experience with Windows operating systems including Windows NT, Windows XP, and modern Windows versions through my helpdesk work and personal projects. I am proficient with Microsoft Office products including Word, Excel, PowerPoint, and Outlook, and I have used these applications extensively in both academic and professional settings. My experience troubleshooting Windows systems, installing operating systems, and configuring software demonstrates my ability to support Windows-based environments effectively.

My current role as a Software Engineer Intern at EpiBuild has provided additional experience with healthcare IT systems and clinical data processing. While this role focuses on software development, it has given me understanding of healthcare technology environments and the importance of reliable IT infrastructure in clinical settings. This experience positions me to understand the critical nature of maintaining functional computer equipment in healthcare environments.

I am currently working toward CompTIA A+ Certification, which aligns with the preferred qualifications for this position. My combination of hands-on repair experience, Windows

expertise, and commitment to professional development positions me well to contribute effectively as a Field Engineer.

What excites me most about this opportunity is the chance to provide essential IT support that enables healthcare professionals to deliver quality patient care. The opportunity to work as a field engineer, installing and repairing computer equipment, printers, and terminals directly supports the critical operations of University Health. I am particularly drawn to the hands-on nature of this role and the opportunity to solve technical problems that impact healthcare delivery.

Thank you for considering my application. I look forward to the opportunity to contribute to University Health's IT Service Delivery team and ensure reliable computer equipment support for healthcare operations.

Sincerely,

Kenny Nguyen
