Siemens Mobility

Dear Hiring Committee,

I am excited to apply for the Junior Network Control Engineer Internship - Rail Electrification at Siemens Mobility. As a computer science student with a strong foundation in system-level programming, algorithms, and software development, I am eager to contribute my technical skills while learning how software and engineering solutions power critical rail operations.

Through my coursework and projects in C, C++, and Python, I've gained experience designing, debugging, and improving software systems while collaborating on team-based development. I also have hands-on practice with Git, Linux environments, and data structures, which are skills that align with the Network Control Department's focus on reliable, well-documented software design and testing. My ability to communicate technical concepts clearly and work with others has been shaped by both academic projects and my experience in collaborative problem-solving settings.

What excites me most about this opportunity is the chance to connect my technical foundation with real-world applications in rail electrification. I am especially interested in learning how Siemens integrates software with PLCs, HMIs, SCADA systems, and protection relays to ensure safety and reliability across rail networks. The opportunity to work alongside engineers from multiple disciplines while contributing to meaningful projects that support transportation infrastructure. This is exactly the kind of challenge I am eager to take on.

I would be grateful for the opportunity to join Siemens Mobility as a Junior Network Control Engineer Intern, to grow under the guidance of experienced engineers, and to contribute to the innovative solutions that keep rail systems moving safely and efficiently. Thank you for considering my application. I look forward to the possibility of contributing to your team this summer.

Sincerely,

Kenny Nguyen
