Saltire Software

Dear Hiring Committee,

I am excited to apply for the Lexical Sets Web App Developer Internship at Saltire Software. As a computer science student with a strong foundation in JavaScript, web technologies, and software optimization, I am eager to contribute to refining your app into a professional-grade tool for dialect coaches while gaining hands-on experience in the process of productization.

In my coursework and personal projects, I've built and optimized applications in JavaScript, Python, and C++, focusing on clarity, scalability, and usability. I enjoy diving into existing codebases, identifying bottlenecks, and making performance improvements – skills that directly align with the internship's goals of improving scope, speed, and robustness. I also have experience with Git, testing practices, and collaborative development, which help me adapt quickly and contribute effectively to team-based projects.

What excites me most about this opportunity is the chance to bridge software development with the performing arts. The idea of building a tool that supports dialect coaches and actors highlights how software can directly empower creative professionals. I'm especially motivated by the challenge of taking a prototype and refining it into a polished, user-friendly product that can have a real-world impact.

I would be grateful for the opportunity to join Saltire Software as a Lexical Sets Web App Developer Intern and contribute to enhancing a tool that blends technology with creativity. Thank you for considering my application. I look forward to the possibility of contributing to your team and learning from this unique and impactful project.

Sincerely,

Kenny Nguyen
