Network Startup Resource Center, University of Oregon Libraries

Dear Hiring Committee,

I am excited to apply for the RouteViews Network Engineer and Systems Developer position with the Network Startup Resource Center at the University of Oregon. As a Computer Science student graduating March 21, 2026, I am eager to contribute to RouteViews, a platform that has been instrumental in Internet routing research and operations since its inception at UO in 1995.

While I have not yet had direct experience using RouteViews data in my work, I am deeply interested in network engineering, Internet infrastructure, and routing protocols. My technical background in software development, system administration, and data processing provides a strong foundation for contributing to RouteViews infrastructure and tool development. I am particularly drawn to this role because it combines network engineering, systems development, and research support, areas where I am eager to grow and contribute.

My experience aligns with several key requirements for this position. I have operational experience with Linux server environments through my work as a Computer Helpdesk Technician at Pacific University, where I managed system performance, performed installations, and troubleshooted network and computational issues. I am proficient with Git for version control and have extensive experience with Python for automation, data processing, and system development. In my current role as a Software Engineer Intern at EpiBuild, I have developed automated workflows, created data processing systems, and built tools that handle large-scale data operations, skills directly applicable to maintaining and developing RouteViews infrastructure.

My software development experience includes building full-stack applications, implementing data processing pipelines, and creating automation tools. I have experience with data integrity and validation systems, which relates to the data analytics and monitoring aspects of RouteViews. My projects demonstrate my ability to work with complex systems, process large datasets, and develop reliable tools, all essential for supporting RouteViews research infrastructure.

I understand that RouteViews provides critical BGP routing data that helps network operators

and researchers address routing stability, security, and performance issues. While I am still developing expertise in BGP and advanced networking protocols, I have a strong foundation in computer networks from my coursework and am eager to deepen my knowledge. My experience with system administration, automation, and data processing positions me well to contribute to RouteViews operations and tool development.

What excites me most about this opportunity is the chance to work on infrastructure that supports global Internet research and operations. RouteViews' role in helping identify routing hijacks, monitor peer visibility, and support RPKI status analysis represents exactly the kind of impactful work I am passionate about. As a UO student, I am particularly drawn to contributing to a platform that originated at my university and continues to serve the global networking community.

I am committed to learning quickly, working collaboratively with the NSRC team, and contributing to the stability and growth of the RouteViews ecosystem. I am excited about the opportunity to support researchers focused on network measurement, data integrity, and Internet routing security, and I am eager to develop the advanced networking skills this role requires.

Thank you for considering my application. I look forward to the possibility of contributing to RouteViews and the Network Startup Resource Center's mission of supporting Internet infrastructure development and research.

Sincerely,

Kenny Nguyen
