University of Oregon Information Services

Dear Hiring Committee,

I am excited to apply for the Server Systems Engineer position with Information Services at the University of Oregon. As a Computer Science student graduating March 21, 2026, I am eager to transition from student to alumni and contribute to UO's IT infrastructure that supports research, academic, and administrative missions.

My skills align with this position through my experience in automation, system management, and scripting. While I am early in my career, I bring transferable technical skills and a strong foundation in systems thinking that I am eager to apply to UO Cloud services.

Experience Summary:

Automation and Scripting:

- Developed automated workflows using Google Apps Script to process and normalize data, demonstrating experience with automation tools and lifecycle management concepts
- Created intelligent systems using algorithms to match and validate data, ensuring data integrity and consistency across systems
- Utilized Python, JavaScript, and C++ for scripting and automation tasks in various projects

System Management and Troubleshooting:

- Served as Computer Helpdesk Technician at Pacific University, troubleshooting computational errors and restoring devices to functional state
- Performed installation and configuration of operating systems, hardware, and software for university faculty and students
- Oversaw daily performance of computer systems and setup of electronic equipment, developing foundational understanding of system administration

Technical Foundation:

- Experience with full-stack web application development, demonstrating understanding of system architecture and integration
- Strong programming background in multiple languages (Python, JavaScript, C, C++, Java) applicable to codifying platform automations and API integrations
- Experience with version control (Git) and collaborative development workflows
- Academic foundation in computer science with coursework covering systems analysis, algorithms, and software engineering principles

What interests me most about this role is the opportunity to work with enterprise-scale private cloud services and contribute to technology solutions that directly support UO's mission. I am particularly drawn to the Systems Automation Services team's focus on continuous improvement and strategic alignment with campus needs. As someone who values collaboration, problem-solving, and learning, I am excited about the opportunity to work alongside experienced engineers while developing expertise in VMware, configuration management, and enterprise server environments.

I understand this position requires experience with specific enterprise tools that I am still developing. However, I am a quick learner with strong foundational skills and am eager to gain hands-on experience with VMware tools, Puppet Enterprise, RedHat Satellite, and other enterprise management platforms. My automation experience, scripting capabilities, and system troubleshooting background provide a solid foundation for this role.

Thank you for considering my application. I look forward to the possibility of contributing to Information Services and supporting the technology infrastructure that enables excellence at the University of Oregon.

Sincerely,

Kenny Nguyen
