Creative Mind Technology LLC

Dear Hiring Team,

I came across the Software Developer role at Creative Mind Technology on Handshake, and it stood out to me because it feels like the kind of role where I could build useful software across different problem areas instead of being boxed into one tiny part of a system.

I recently graduated from the University of Oregon with a B.S. in Computer Science, and most of what I've been building lately has been centered around full-stack software, data workflows, and tools that make messy processes easier to manage. I like projects where there is some real-world complexity involved: pulling data from different places, cleaning it up, designing the backend logic, making the interface usable, and then improving the system once I see where the rough edges are.

One project I've spent a lot of time on is Backlog, a full-stack job search platform that aggregates roles from multiple sources, filters and normalizes job data, scores role fit with AI, and helps automate parts of the application process. I also built Syllabify, an AI study scheduling app that parses syllabi, extracts assignments and due dates, and generates conflict-aware schedules around a student's calendar. Outside of projects, I worked as a Software Engineer Intern at EpiBuild, where I automated clinical data processing and built patient-matching logic to deal with inconsistent spreadsheet records.

What I like about Creative Mind Technology is that the work seems practical. Business applications, finance software, data management, web apps, custom product development — those are the kinds of systems where good software can quietly make someone's day much easier. I'm still early in my career, but I've been very intentional about building complete products, learning how systems fit together, and improving my ability to ship clean, maintainable software.

I'd be excited for the chance to learn more about the team and see how I could contribute as a Software Developer.

Thanks for your time,

Kenny Nguyen
