Department of the Navy

Naval Sea Systems Command

Dear Hiring Committee,

I am excited to apply for the Software Developer position with Naval Sea Systems Command. As a Computer Science student graduating March 21, 2026 from the University of Oregon, I bring strong software development, programming, and system integration experience that aligns well with supporting Weapon Control Systems development for the Navy.

My software development experience positions me well for this role. As a Software Engineer Intern at EpiBuild, I have developed and written code for new computer applications following software assurance best practices. I have analyzed user needs and software requirements to determine design feasibility, developed software requirements and design specifications, and implemented solutions using object-oriented design principles. My work includes programming in multiple languages including Java, Python, C++, and JavaScript, and I have experience with software debugging, error correction, and performance optimization.

My system integration experience aligns with the technical requirements of this position. I have conducted system integration efforts including developing software requirements and design, programming, integration, troubleshooting, and data analysis. I have developed full-stack web applications that integrate multiple components, created automated workflows that process and integrate data from various sources, and implemented systems that require careful coordination of software components. This experience demonstrates my ability to work on complex integration projects similar to Weapon Control Systems development.

What excites me most about this opportunity is the chance to contribute to critical defense systems that protect our nation's naval capabilities. The opportunity to develop software for Weapon Control Systems, work on system integration efforts, and apply software development best practices to defense applications represents exactly the kind of meaningful technical work I am passionate about pursuing. I am particularly drawn to the focus on software requirements and design, object-oriented programming, and the opportunity to mentor and collaborate across functional areas.

I understand that this position requires security clearance and involves work on critical defense systems. I am a U.S. citizen, committed to meeting all requirements including DoDM 8140.03 Cyber Workforce Qualification, and prepared to undergo necessary security clearance processes. I am eager to contribute to Naval Sea Systems Command's mission while developing expertise in defense software development.

Thank you for considering my application. I look forward to the opportunity to contribute to Weapon Control Systems software development and support Naval Sea Systems Command's critical mission.

Sincerely,

Kenny Nguyen
