MCG Health

Dear Hiring Committee,

I am excited to apply for the Software Engineering Intern position with MCG Health's 2026 Summer Internship Program. As a Computer Science student graduating March 21, 2026 from the University of Oregon, I bring strong software engineering experience, healthcare technology background, and a passion for building innovative solutions that improve patient care.

My software engineering experience aligns well with this position. I have extensive experience with object-oriented programming languages including Java, C++, and Python, and I am proficient with IDEs including Visual Studio Code and Visual Studio Community. As a Software Engineer Intern at EpiBuild, I have developed full-stack web applications, implemented automated workflows, and built systems that process and manage healthcare data. This experience demonstrates my ability to work effectively in software development environments, collaborate with team members, and contribute to meaningful projects.

My healthcare technology experience positions me well for MCG's mission-driven work. At EpiBuild, I work extensively with clinical data systems, developing applications that support patient care and healthcare operations. I have built intelligent data matching systems, created visualizations for healthcare staff, and automated workflows that improve efficiency in clinical settings. This experience has given me understanding of healthcare technology challenges and the importance of building reliable, user-friendly solutions that support patient-focused care.

My technical skills match the requirements of this position. I have experience with object-oriented design principles, software development lifecycle processes, and collaborative development using Git. I am proficient with Microsoft Office Suite including Excel, Word, and PowerPoint, and I have experience with data analysis and visualization tools. My projects demonstrate my ability to analyze requirements, design solutions, and implement software that meets user needs.

What excites me most about this opportunity is the chance to contribute to MCG's mission of transforming healthcare through innovative software solutions. The opportunity to work on a multitenant SaaS application, learn about service-oriented architecture, and contribute to projects

that reduce manual workflows and enhance efficiencies represents exactly the kind of meaningful technical work I am passionate about pursuing. I am particularly drawn to MCG's people-first culture and focus on collaboration and continuous growth.

I am eager to participate in MCG's internship program, work on impactful projects, and learn from industry leaders while contributing to the Software Engineering and Design team's goals. I am committed to professional growth, actively seeking feedback, and taking initiative to develop both personally and professionally.

Thank you for considering my application. I look forward to the opportunity to contribute to MCG Health's mission of delivering patient-focused care through innovative software solutions.

Sincerely,

Kenny Nguyen
