University of Oregon | ASU 2 - Economics, Political Science, Sociology

Dear Hiring Committee,

I am excited to apply for the Student Programmer position with ASU 2. As a Computer Science major at the University of Oregon with a solid background in web development, I bring both a solid technical foundation and a strong eagerness to learn. This position appeals to me because it means I can fully utilize my skills that I've learned in my internships as well as my Software Engineering course at UO, as well as being able to gain access to the data required to visualize it and make it feel "alive".

In my internships, I've created web applications (both frontend and backend) to take in data, process data, and create a visualization of the data for the company I work for. I worked for a biopharmaceutical company that specialized in tech. I was able to take records of patients and create visualizations that my supervisor used (of course, following HIPAA compliance).

I've actually already applied by seeing the forwarded email from Zera and already sent in my demo of what I can do through a video, which I approved for Cat to view. I didn't realize there was also a job application on Handshake for this, so I decided to apply again anyway.

What motivates me most about this position is the chance to apply my web development knowledge in the field of economics, political science, and sociology while learning how the data I visualize will contribute to research and success. I value the mentorship and growth opportunities this role provides, and I am eager to contribute my adaptability, problem-solving mindset, and enthusiasm for web development to your team.

Thank you for your time and consideration. I look forward to the opportunity to support ASU 2 while developing skills that will serve both the university and my future career.

Sincerely,

Kenny Nguyen
